

Hot Wheels Car Attachment Instructions

The Hot Wheels cars are held with industrial strength Velcro, 3M Dual Lock, that will securely hold the cars on the brackets. Games are also shipped with wire ties around the cars to secure the cars for transport. Operators can choose to leave the ties in place to ensure the cars don't come off from ball strikes. Home users may choose to remove for aesthetics.

Extra pieces of Dual Lock have been included in the goody bag so you can replace the cars with ones from your collection! The cars you choose should have a flat and clean surface to provide sufficient adhesion for the Dual Lock. API is not responsible for improper installation resulting in damage to your game.

Steps:

1. Pick out your favorite Hot Wheels cars (flat bottom works best). Check the car will fit on the stand,. Some cars have a bottom that's not flat or a wheel base that doesn't have enough spacing.
2. Clean the bottom with rubbing alcohol.
3. Peel off the backing on a piece of Dual Lock (pieces included in the "goodie bag" with your game).
4. Press the adhesive firmly on the car bottom.
5. Squeeze the car firmly onto dual lock locations around the playfield. Be sure to fully squeeze along the length of the car to be sure it is fully locked in .
